<b>Statistical Methods for Reliability Data</b>	<b>i</b>
<b>Preface to Second Edition</b>	<b>iii</b>
<b>Preface to First Edition</b>	<b>iv</b>
<b>Acknowledgments</b>	<b>viii</b>
<b>1 Reliability Concepts and Reliability Data</b>	<b>1</b>
1.1 Introduction	1
1.1.1 Quality and Reliability	1
1.1.2 Reasons for Collecting Reliability Data	2
1.1.3 Distinguishing Features of Reliability Data	2
1.2 Examples of Reliability Data	3
1.2.1 Failure-Time Data with no Explanatory Variables	3
1.2.2 Failure-Time Data with Explanatory Variables	9
1.2.3 Degradation Data with no Explanatory Variables	12
1.2.4 Degradation Data with Explanatory Variables	13
1.3 General Models for Reliability Data	13
1.3.1 Reliability Studies and Processes	13
1.3.2 Causes of Failure and Degradation Leading to Failure	14
1.3.3 Environmental Effects on Reliability	15
1.3.4 Definition of Time Scale	15
1.3.5 Definitions of Time Origin and Failure Time	16
1.4 Models for Time to Event Versus Models for Recurrences in a Sequence of Events	16
1.4.1 Modeling Times to an Event	17
1.4.2 Modeling a Sequence of Recurrent Events	17
1.5 Strategy for Data Collection, Modeling, and Analysis	17
1.5.1 Planning a Reliability Study	18
1.5.2 Strategy for Data Analysis and Modeling	18
<b>2 Models, Censoring, and Likelihood for Failure-Time Data</b>	<b>22</b>
2.1 Models for Continuous Failure-Time Processes	22
2.1.1 Failure-Time Distribution Functions	23
2.1.2 The Quantile Function and Distribution Quantiles	25
2.1.3 Distribution of Remaining Life	26
2.2 Models for Discrete Data from a Continuous Process	27
2.2.1 Multinomial Failure-Time Model	27
2.2.2 Multinomial cdf	28
2.3 Censoring	30
2.3.1 Censoring Mechanisms	30
2.3.2 Important Assumptions on Censoring Mechanisms	30
2.3.3 Informative Censoring	31

2.4	Likelihood . . . . .	31
2.4.1	Likelihood-Based Statistical Methods . . . . .	31
2.4.2	Specifying the Likelihood Function . . . . .	31
2.4.3	Contributions to the Likelihood Function . . . . .	32
2.4.4	Form of the Constant Term $\mathcal{C}$ . . . . .	34
2.4.5	Likelihood Terms for General Reliability Data . . . . .	34
2.4.6	Other Likelihood Terms . . . . .	35
<b>3</b>	<b>Nonparametric Estimation</b> . . . . .	<b>40</b>
3.1	Estimation from Complete Data . . . . .	41
3.2	Estimation from Singly Censored Interval Data . . . . .	41
3.3	Basic Ideas of Statistical Inference . . . . .	43
3.3.1	The Sampling Distribution of $\hat{F}(t_i)$ . . . . .	43
3.3.2	Confidence Intervals . . . . .	44
3.4	Confidence Intervals from Complete or Singly Censored Data . . . . .	44
3.4.1	Pointwise Binomial-Based Conservative Confidence Interval for $F(t_i)$ . . . . .	44
3.4.2	Pointwise Binomial-Based Jeffreys-Approximate Confidence Interval for $F(t_i)$ . . . . .	45
3.4.3	Pointwise Wald-Approximate Confidence Interval for $F(t_i)$ . . . . .	46
3.5	Estimation from Multiply Censored Data . . . . .	47
3.6	Pointwise Confidence Intervals from Multiply Censored Data . . . . .	50
3.6.1	Approximate Variance of $\hat{F}(t_i)$ . . . . .	50
3.6.2	Greenwood's Formula . . . . .	50
3.6.3	Pointwise Wald-Approximate Confidence Interval for $F(t_i)$ . . . . .	50
3.7	Estimation from Multiply Censored Data with Exact Failures . . . . .	52
3.8	Simultaneous Confidence Bands . . . . .	54
3.8.1	Motivation . . . . .	54
3.8.2	Large-Sample Simultaneous Confidence Bands for $F(t)$ . . . . .	54
3.8.3	Determining the Time Range for Simultaneous Confidence Bands for $F(t)$ . . . . .	56
3.9	Uncertain Censoring Times . . . . .	57
3.10	Arbitrary Censoring . . . . .	58
<b>4</b>	<b>Location-Scale-Based Parametric Distributions</b> . . . . .	<b>67</b>
4.1	Introduction . . . . .	67
4.2	Quantities of Interest in Reliability Applications . . . . .	68
4.3	Location-Scale and Log-Location-Scale Distributions . . . . .	69
4.4	Exponential Distribution . . . . .	70
4.5	Normal Distribution . . . . .	71
4.6	Lognormal Distribution . . . . .	72
4.7	Smallest Extreme Value Distribution . . . . .	74
4.8	Weibull Distribution . . . . .	74
4.9	Largest Extreme Value Distribution . . . . .	76
4.10	Fréchet Distribution . . . . .	77
4.11	Logistic Distribution . . . . .	79
4.12	Loglogistic Distribution . . . . .	80
4.13	Generalized Gamma Distribution . . . . .	80
4.13.1	Generalized Gamma Moments and Quantiles . . . . .	82
4.13.2	Special Cases of the Generalized Gamma Distribution . . . . .	82
4.14	Distributions with a Threshold Parameter . . . . .	82
4.15	Parameters and Parameterization . . . . .	83
4.16	Generating Pseudorandom Observations from a Specified Distribution . . . . .	84
4.16.1	Uniform Pseudorandom Number Generator . . . . .	84
4.16.2	Pseudorandom Observations from Continuous Distributions . . . . .	84
4.16.3	Efficient Generation of Censored Pseudorandom Samples . . . . .	84
4.16.4	Pseudorandom Observations for Discrete Distributions . . . . .	85

<b>5</b>	<b>System Reliability Concepts and Methods</b>	<b>89</b>
5.1	Non-Repairable System Reliability Metrics	90
5.1.1	System cdf	90
5.1.2	Other Non-Repairable System Reliability Metrics	90
5.2	Series Systems	90
5.2.1	Probability of Failure for a Series System Having Components with Independent Failure Times	90
5.2.2	Importance of Part Count in Product Design	91
5.2.3	Series System of Independent Components Having Weibull Distributions with the Same Shape Parameter	92
5.2.4	Effect of Positive Dependency in a Two-Component Series System	92
5.3	Parallel Systems	93
5.3.1	The Effect of Parallel Redundancy in Improving (Sub)-System Reliability	94
5.3.2	Effect of Positive Dependency in a Two-Component Parallel-Redundant System	95
5.4	Series-Parallel Systems	95
5.4.1	Series-Parallel Systems with System-Level Redundancy	96
5.4.2	Series-Parallel System Structure with Component-Level Redundancy	96
5.5	Other System Structures	97
5.5.1	Bridge System Structures	97
5.5.2	$k$ -Out-of- $s$ System Structure	97
5.5.3	$k$ -out-of- $s$ : F (failed) systems	98
5.6	Multistate System Reliability Models	98
5.6.1	Nonrepairable Multistate Systems	99
5.6.2	Repairable Multistate Systems	99
5.6.3	Repairable System Availability	100
5.6.4	Repairable System Mean Time Between Failures	100
<b>6</b>	<b>Probability Plotting</b>	<b>103</b>
6.1	Introduction	103
6.1.1	Purposes of Probability Plots	103
6.1.2	Probability Plotting Scales: Linearizing a cdf	104
6.2	Linearizing Location-Scale-Based Distributions	104
6.2.1	Linearizing the Exponential cdf	104
6.2.2	Linearizing the Normal cdf	104
6.2.3	Linearizing the Lognormal cdf	105
6.2.4	Linearizing the Weibull cdf	107
6.3	Graphical Goodness of Fit	107
6.4	Probability Plotting Positions	107
6.4.1	Criteria for Choosing Plotting Positions	108
6.4.2	Choice of Plotting Positions	109
6.4.3	Summary of Probability Plotting Methods	114
6.5	Notes on the Application of Probability Plotting	114
6.5.1	Using Simulation to Help Interpret Probability Plots	114
6.5.2	Possible Reason for a Bend in a Probability Plot	117
6.5.3	Use of Grid Lines and Special Scales on Probability Plots	117
<b>7</b>	<b>Parametric Likelihood Fitting Concepts: Exponential Distribution</b>	<b>127</b>
7.1	Introduction	127
7.2	Parametric Likelihood	130
7.2.1	Probability of the Data	130
7.2.2	Likelihood Function and Its Maximum	130
7.2.3	Comparison of $\alpha$ -Particle Data Analyses	132
7.3	Confidence Intervals for $\theta$	132
7.3.1	Likelihood Confidence Intervals for $\theta$	132

7.3.2	Relationship Between Confidence Intervals and Significance Tests	133
7.3.3	Normal-Approximation Confidence Intervals for $\theta$	134
7.4	Confidence Intervals for Functions of $\theta$	135
7.4.1	Confidence Intervals for the Arrival Rate	135
7.4.2	Confidence Intervals for $F(t; \theta)$	136
7.5	Comparison of Confidence Interval Procedures	136
7.6	Likelihood for Exact Failure Times	136
7.6.1	Correct Likelihood for Observations Reported as Exact Failures	136
7.6.2	Using the Density Approximation for Observations Reported as Exact Values	137
7.6.3	ML Estimates for the Exponential $\theta$ Based on the Density Approximation	137
7.6.4	Confidence Intervals for the Exponential with Complete Data or Failure Censoring	138
7.7	Data Analysis with No Failures	138
<b>8</b>	<b>Maximum Likelihood for Log-Location-Scale Distributions</b>	<b>143</b>
8.1	Introduction	143
8.2	Likelihood	144
8.2.1	Likelihood for Location-Scale Distributions	144
8.2.2	Likelihood for the Lognormal, Weibull, and Other Log-Location-Scale Distributions	144
8.3	Likelihood Confidence Regions and Intervals	147
8.3.1	Joint Confidence Regions for $\mu$ and $\sigma$	147
8.3.2	Individual Confidence Intervals for $\mu$ and $\sigma$	147
8.3.3	Likelihood Confidence Intervals for Functions of $\mu$ and $\sigma$	150
8.3.4	Relationship Between Confidence Intervals and Significance Tests	152
8.4	Normal-Approximation Confidence Intervals	154
8.4.1	Parameter Variance–Covariance Matrix	155
8.4.2	Confidence Intervals for Model Parameters	155
8.4.3	Normal-Approximation Confidence Intervals for Functions of $\mu$ and $\sigma$	156
8.4.4	Improved Normal-Approximation Confidence Intervals	158
8.5	Estimation with a Given Shape Parameter	159
8.5.1	Lognormal/Normal Distribution with Given $\sigma$	159
8.5.2	Weibull/Smallest Extreme Value Distribution With Given $\sigma$	159
8.5.3	Weibull/Smallest Extreme Value Distribution With Given $\beta = 1/\sigma$ and Zero Failures	161
<b>9</b>	<b>Introduction to Bayesian Statistical Intervals</b>	<b>169</b>
9.1	Bayesian Inference: Overview	170
9.1.1	Motivation	170
9.1.2	The Difference Between Bayesian Inference and Non-Bayesian Likelihood Inference	170
9.1.3	Bayes' Theorem and Bayesian Data Analysis	171
9.1.4	The Need for Prior Information	172
9.1.5	Parameterization	172
9.2	Bayesian Inference: an Illustrative Example	173
9.2.1	Example Description and Weibull ML Analysis	173
9.2.2	Specification of Prior Information	174
9.2.3	Characterizing the Joint Posterior Distribution via Simulation	175
9.2.4	Comparison of Joint Posterior Distributions Based on Diffuse and Informative Prior Information on the Weibull Shape Parameter $\beta$	176
9.2.5	Generating Sample Draws via Simple Simulation	178
9.2.6	Using the Sample Draws to Construct Bayesian Credible Intervals	178
9.3	More About Prior Information and Specification of a Prior Distribution	182
9.3.1	Diffuse Versus Informative Prior Distributions	182
9.3.2	Who's Prior Distribution Should We Use?	183
9.3.3	Sources of Prior Information	183
9.3.4	Implementing Bayesian Analyses using Conjugate Distributions	184

9.3.5	Some Further Considerations in the Specification of Prior Distributions	184
9.4	Implementing Bayesian Analyses Using Markov Chain Monte Carlo Simulation	185
9.4.1	Basic Ideas of MCMC Simulation	185
9.4.2	Risks of Misuse and Diagnostics	187
9.4.3	MCMC Summary	187
9.4.4	Software for MCMC	189
<b>10</b>	<b>Special Parametric Models</b>	<b>194</b>
10.1	Introduction	194
10.2	The Limited Failure Population Model	194
10.2.1	The Likelihood Function and Its Maximum	196
10.2.2	Profile Likelihood Functions and Likelihood-Based Confidence Intervals for $\mu$ , $\sigma$ , and $\mathbf{p}$	196
10.3	Truncated Data and Truncated Distributions	197
10.3.1	Examples of Left Truncation	198
10.3.2	Likelihood with Left Truncation	199
10.3.3	Nonparametric Estimation with Left Truncation	199
10.3.4	ML Estimation with Left Truncated Data	200
10.3.5	Examples of Right Truncation	201
10.3.6	Likelihood with Right (and Left) Truncation	201
10.3.7	Nonparametric Estimation with Right (and Left) Truncation	202
10.4	Fitting Distributions that Have a Threshold Parameter	202
10.4.1	Estimation with a Given Threshold Parameter	203
10.4.2	Probability Plotting Methods	203
10.4.3	Likelihood Methods	205
10.4.4	Summary of Results of Fitting Models to Skewed Distributions	208
<b>11</b>	<b>Two-Sample Comparison of Lifetime Distributions</b>	<b>218</b>
11.1	Comparison of Groups Using Separate Analyses: Differing Spread Parameters	218
11.2	Comparison of Groups Using Combined Analyses: Common Spread Parameters	220
<b>12</b>	<b>Planning Life Tests for Estimation</b>	<b>222</b>
12.1	Introduction	223
12.1.1	Basic Ideas	223
12.1.2	Use of Simulation in Test Planning	223
12.1.3	Uncertainty in Planning Values	226
12.2	Approximate Variance of ML Estimators	226
12.2.1	Motivation for Use of Large-Sample Approximations of Test Plan Properties	226
12.2.2	Basic Large-Sample Approximations	227
12.3	Sample Size for Unrestricted Functions	227
12.4	Sample Size for Positive Functions	228
<b>13</b>	<b>Planning Reliability Demonstration Tests</b>	<b>232</b>
13.1	Demonstration Criterion	232
13.2	Minimum Sample Size Test, Given Shape Parameter	232
13.3	Other Demonstration Tests, Given Shape Parameter	232
13.4	Probability of Successful Demonstration	232
13.4.1	Reliability Demonstration Plans	232
13.4.2	Weibull Minimum Sample Size Reliability Demonstration Plans with Given $\beta$	233
13.4.3	Extensions for Other Reliability Demonstration Test Plans	234
13.5	Bayesian Methods for Demonstration Testing	235
<b>14</b>	<b>Prediction of Field Failures</b>	<b>236</b>
14.1	The (Approximate) Pivotal Method for Prediction Intervals	237
14.1.1	Type II (Failure) Censoring	237

14.1.2	Type I (Time) Censoring . . . . .	238
14.2	Introduction . . . . .	239
14.2.1	Motivation and Prediction Problems . . . . .	239
14.2.2	Model . . . . .	240
14.2.3	Data . . . . .	240
14.3	Probability Prediction Intervals ( $\theta$ Given) . . . . .	241
14.4	Statistical Prediction Interval ( $\theta$ Estimated) . . . . .	241
14.4.1	Coverage Probability Concepts . . . . .	241
14.4.2	Relationship Between One-Sided and Two-Sided Prediction Intervals . . . . .	242
14.4.3	Naive Method for Computing a Statistical Prediction Interval . . . . .	242
14.5	The (Approximate) Pivotal Method for Prediction Intervals . . . . .	244
14.5.1	Type II (Failure) Censoring . . . . .	244
14.5.2	Type I (Time) Censoring . . . . .	244
14.6	Prediction in Simple Cases . . . . .	246
14.6.1	Complete Samples from a Lognormal Distribution . . . . .	246
14.6.2	Complete or Type II Censored Samples from an Exponential Distribution . . . . .	247
14.7	Calibrating Naive Statistical Prediction Bounds . . . . .	247
14.7.1	Calibration by Simulation of the Sampling/Prediction Process . . . . .	247
14.7.2	Calibration by Averaging Conditional Coverage Probabilities . . . . .	248
14.8	Prediction of Future Failure from a Single Group of Units in the Field . . . . .	251
14.9	Prediction of Future Failure from Multiple Groups of Units in the Field with Staggered Entry into the Field . . . . .	252
<b>15</b>	<b>Analysis of Data with More than One Failure Mode</b> . . . . .	<b>260</b>
15.1	Competing Risk Concepts . . . . .	260
15.1.1	Products with Two or More Causes of Failure . . . . .	260
15.2	Nonparametric Competing Risk Estimation . . . . .	261
15.3	Parametric Competing Risk Estimation . . . . .	261
15.3.1	Estimation with Two or More Causes of Failure . . . . .	261
15.3.2	Estimation of Multiple Failure Mode Distributions when Only Some Failure Modes are Identified in the Data . . . . .	262
15.4	Bayesian Approach . . . . .	264
<b>16</b>	<b>Failure-Time Regression Analysis</b> . . . . .	<b>265</b>
16.1	Introduction . . . . .	265
16.2	Failure-Time Regression Models . . . . .	267
16.3	Simple Linear Regression Models . . . . .	268
16.3.1	Location-Scale Regression Model and Likelihood . . . . .	268
16.3.2	Log-Location-Scale Regression Model and Likelihood . . . . .	269
16.4	Standard Errors and Confidence Intervals for Regression Models . . . . .	269
16.4.1	Standard Errors and Confidence Intervals for Parameters . . . . .	271
16.4.2	Standard Errors and Confidence Intervals for Distribution Quantities at Specific Explanatory Variable Conditions . . . . .	272
16.5	Regression Model with Quadratic $\mu$ and Nonconstant $\sigma$ . . . . .	273
16.5.1	Quadratic Regression Relationship for $\mu$ and a Constant Spread Parameter . . . . .	273
16.5.2	Quadratic Regression Model with Nonconstant Spread Parameter ( $\sigma$ ) . . . . .	273
16.5.3	Further Comments on the Use of Empirical Regression Models . . . . .	275
16.5.4	Comment on Numerical Methods . . . . .	276
16.6	Checking Model Assumptions . . . . .	276
16.6.1	Definition of Residuals . . . . .	276
16.6.2	Regression Diagnostics . . . . .	278
16.7	Models with Two or More Explanatory Variables . . . . .	278
16.7.1	Model-Free Graphical Analysis of Two-Variable Regression Data . . . . .	278
16.7.2	Two-Variable Regression Model Without Interaction . . . . .	281

16.7.3 Two-Variable Regression Model with Interaction . . . . .	281
<b>17 Accelerated Life Test Models and Analysis</b>	<b>289</b>
17.1 Introduction . . . . .	290
17.1.1 Motivation and Background for Accelerated Testing . . . . .	290
17.1.2 Different Types of Acceleration . . . . .	291
17.1.3 Types of Responses . . . . .	291
17.1.4 Methods of Acceleration . . . . .	292
17.2 Accelerated Life Test Models . . . . .	292
17.2.1 Use-Rate Acceleration . . . . .	293
17.2.2 Temperature Acceleration . . . . .	293
17.2.3 Arrhenius Relationship Time-Acceleration Factor . . . . .	294
17.2.4 Eyring Relationship Time-Acceleration Factor . . . . .	295
17.2.5 Reaction-Rate Acceleration for a Nonlinear Degradation Path Model . . . . .	297
17.2.6 Acceleration for a Linear Degradation Path Model . . . . .	299
17.2.7 Acceleration of Parallel Chemical Reactions . . . . .	300
17.2.8 Voltage and Voltage-Stress Acceleration . . . . .	300
17.2.9 Voltage-Acceleration Mechanisms . . . . .	301
17.2.10 The Inverse Power Relationship . . . . .	301
17.2.11 Physical Motivation for the Inverse Power Relationship for Voltage-Stress Acceleration . . . . .	303
17.2.12 Other Inverse Power Relationships . . . . .	304
17.2.13 Acceleration Models with More than One Accelerating Variable . . . . .	305
17.2.14 Generalized Eyring Relationship . . . . .	305
17.2.15 Temperature–Voltage Acceleration . . . . .	305
17.2.16 Temperature–Current Density Acceleration . . . . .	306
17.2.17 Temperature–Humidity Acceleration . . . . .	306
17.2.18 Guidelines for the Use of Acceleration Models . . . . .	307
17.3 Analysis of Single-Variable ALT Data . . . . .	307
17.3.1 Accelerated Life Test Models . . . . .	309
17.3.2 Strategy for Analyzing ALT Data . . . . .	309
17.4 Analysis of Single-Variable ALT Data . . . . .	310
17.4.1 Scatter Plot of ALT Data . . . . .	310
17.4.2 Multiple Probability Plot of Nonparametric cdf Estimates at Individual Levels of the Accelerating Variable . . . . .	310
17.4.3 Adding ML Estimates at Each Level of the Accelerating Variable(s) to a Multiple Probability Plot . . . . .	311
17.4.4 Multiple Probability Plot of ML Estimates with a Fitted Acceleration Relationship . . . . .	313
17.4.5 Checking Other Model Assumptions . . . . .	315
17.4.6 Estimation at Use Conditions . . . . .	316
<b>18 Other Topics in Accelerated Life Testing</b>	<b>328</b>
18.1 Accelerated Life Tests with Interval Censored Data . . . . .	328
18.2 Multi-Factor Accelerated Life Tests . . . . .	332
18.3 Some Practical Suggestions for Drawing Conclusions from ALT Data . . . . .	336
18.3.1 Predicting Product Performance . . . . .	336
18.3.2 Drawing Conclusions from Accelerated Test Experiments . . . . .	337
18.4 Other Kinds of Accelerated Life Tests . . . . .	337
18.4.1 Continuous Operation Product Accelerated Testing . . . . .	337
18.4.2 Highly Accelerated Life Tests . . . . .	338
18.4.3 Environmental Stress Testing . . . . .	338
18.4.4 Burn-in . . . . .	339
18.4.5 Environmental Stress Screening . . . . .	339
18.5 Potential Pitfalls of Accelerated Life Testing . . . . .	340

18.5.1	Pitfall 1: Multiple (Unrecognized) Failure Modes . . . . .	341
18.5.2	Pitfall 2: Failure to Properly Quantify Uncertainty . . . . .	341
18.5.3	Pitfall 3: Multiple Time Scales and Degradation Affected by More Than One Accelerating Variable . . . . .	341
18.5.4	Pitfall 4: Masked Failure Mode . . . . .	342
18.5.5	Pitfall 5: Faulty Comparison . . . . .	342
18.5.6	Pitfall 6: Accelerating Variables Can Cause Deceleration! . . . . .	345
18.5.7	Pitfall 7: Untested Design/Production Changes . . . . .	345
18.5.8	Pitfall 8: Beware of Drawing Conclusions on the Basis of Specially Built Prototype Test Units. . . . .	345
<b>19</b>	<b>Destructive Degradation Data Analysis</b>	<b>350</b>
19.1	Introduction . . . . .	350
<b>20</b>	<b>Repeated Measured Degradation Analysis</b>	<b>351</b>
20.1	Introduction . . . . .	351
20.2	Models for Accelerated Degradation Analysis . . . . .	352
20.2.1	Accelerated Degradation Model Parameters . . . . .	353
20.3	Estimating Accelerated Degradation Test Model Parameters . . . . .	354
20.4	Estimation of Failure Probabilities, Distribution Quantiles, and Other Functions of Model Parameters . . . . .	356
<b>21</b>	<b>Analysis of Repairable System and Other Recurrence Data</b>	<b>360</b>
21.1	Introduction . . . . .	361
21.1.1	Repairable System Reliability Data and Other Recurrence Data . . . . .	361
21.1.2	A Nonparametric Model for Recurrence Data . . . . .	362
21.2	Nonparametric Estimation of the MCF . . . . .	363
21.2.1	Nonparametric Model Assumptions . . . . .	363
21.2.2	Point Estimate of the MCF . . . . .	363
21.2.3	Standard Errors and Nonparametric Confidence Intervals for the MCF . . . . .	364
21.2.4	Adequacy of Normal-Approximation Confidence Intervals . . . . .	367
21.3	Nonparametric Comparison of Two Samples of Recurrence Data . . . . .	369
<b>22</b>	<b>Case Studies and Further Applications</b>	<b>376</b>
